

IDIOT — Whitepaper (v1)

Version: v1 • Date: 2025-10-02 • Network: Base

1. Overview

IDIOT is a standard ERC-20 token deployed on the Base network. It has no transfer taxes, no blacklist/whitelist, and no pausable mechanics. Holders can trade freely on decentralized exchanges. The project combines professional operations (multisig custody, time-locked allocations) with a meme-forward community brand.

2. Contract & Links (verify on-chain)

Token Contract (Base): 0xC29EF04CFFe38012dcfc1E96a2B368443f298dE1 Dexscreener (PAIR): <pair-url> Uniswap (PAIR): <uniswap-pair-url> LP Lock (24m): <locker-url> Safes (multisigs): TR-SAFE (3/4) <safe-url> • OPS-SAFE (2/4) <safe-url> Timelocks (Sablier): Team • Treasury • Reserve • Community <stream-urls> Proof (anti-honeypot): Buy tx <https://basescan.org/tx/0xe4d9d758e61877560e6ef8e70e6d0c4ceacb04ff58a532fc2fffeba2c69904e0> Sell tx <https://basescan.org/tx/0x1061b5f2b0cba94e9c444e34b9d966373c4db3ca6e07c4c9f35592a1fb8e7d66>

3. Supply & Allocation (1,000,000,000 IDIOT)

Community & Airdrops: 250,000,000 (25%) Liquidity Pool: 150,000,000 (15%) Team (locked & vested): 100,000,000 (10%) Treasury / Ops: 50,977,932.19005866561074916 (~5.1%) Reserve (Cold Treasury): 449,022,067.80994133438925084 (~44.9%)

4. Vesting & Emissions

Timelocks are implemented via Sablier on Base. Parameters: - Team: 12-month cliff, followed by 24-month linear vesting. - Treasury: optional 0–6 month cliff, then 24-month linear vesting. - Reserve: 12-month cliff, then 24–36 month linear vesting. - Community (25%): distributed via OPS-SAFE governed distributor stream(s) and weekly claim epochs. All timelock / stream URLs will be published on the website and linked here once live.

5. Liquidity & Market Operations

Primary pool: Uniswap v4 on Base, fee tier 0.3%, positioned with a wide range to reduce price impact. LP position is locked (target: 24 months) using a reputable locker (e.g., UNCX). Additional liquidity can be added as average trade sizes increase; operations are executed from a dedicated LP hot wallet.

6. Custody & Governance

Custody uses two multisigs (Safe): - TR-SAFE (3 of 4 owners): controls Team, Treasury, Reserve allocations. - OPS-SAFE (2 of 4 owners): controls Community distributor operations. This structure prevents single-key risk while enabling efficient weekly operations.

7. Community & Airdrops

Weekly cycle: snapshot (Tuesdays), eligibility post, claims (Thursdays). Criteria include holding IDIOT, providing LP, and completing community quests. Anti-Sybil screening applies; Base network only. Claim instructions are available on /community_rewards.html and /learn.html.

8. Disclosures & Risk

No investment advice. Crypto assets are volatile and risky. The team makes no promises about price or returns.

IDIOT — Whitepaper (v1) (cont.)

All claims should be verified on-chain. The website provides transparent links to contract, LP lock, multisigs, and timelock streams. If discrepancies are ever found, on-chain reality governs.
