IDIOT Ops Runbook — Buttons to Press

Signers & Wallets (Base)
TR-SAFE (3/4): owners = Cold-A, Cold-B, Hot-OPS, Hot-LP. OPS-SAFE (2/4): same owners. Cold wallets hold gas-dust only (0.01–0.02 ETH each). Hot-OPS holds 50–100 in ETH for admin. Hot-LP funds LP only.

Weekly Community Cycle
1) Take snapshot (Tue). 2) Post eligibility. 3) Open claims (Thu). 4) Monitor claim txs. If Sablier funded: tokens accrue per stream; OPS-SAFE triggers claim/approve as needed.

How to Add Liquidity (Uniswap v4)
Open Uniswap → Network: Base → Pool → New Position → Token A: IDIOT (paste address) → Token B: WETH → Fee: 0.3% → Range: Wide (≈ −50% to +100%) → Enter ETH amount → Approve → Add Liquidity. Save the position/pair links.

How to Lock LP (UNCX v4)
Open UNCX → Liquidity → v4 Locker → Connect HOT-LP → Select your v4 position → Approve LP-NFT → Lock → Duration: 24 months → Confirm. Copy the locker URL; add it to the site (Wallets & Unlocks + footer).

How to Fund/Verify Timelocks (Sablier)
Open Sablier on Base → Create Stream → Cliff-Linear → Choose beneficiary (payout address controlled by TR-SAFE or OPS-SAFE) → Set cliff & duration → Approve IDIOT → Deposit. Save the stream URL. Post it on the site. If a parameter is wrong, cancel and redeploy; then post an 'Adjustments' note with tx links.

Site Updates (Proof & Links)
Files: index.html + community_rewards.html. Insert/verify: Buy & Sell tx links, Contract link, Pair link, LP Lock link, TR-SAFE/OPS-SAFE links, and Sablier stream links. For anything not ready, label 'Pending' and update after execution.

Emergency Playbook
• Hot wallet compromised → Revoke approvals (Revoke.cash), rotate owner in Safe, move ops to fresh wallet. • Website issue → Roll back by pointing docroot to previous release. • 'No liquidity' complaints → Your LP is out of range; add a band around spot or widen range. • Warning banners → File re-review with your Proof + LP lock + Sablier links.
